PROFESSIONAL SUMMARY

Full Stack Developer with 2+ years shipping production event-driven systems, RabbitMQ pipelines, Socket.IO/MongoDB change-stream sync, and data modeling for a high-availability ERP platform. Recently built OrchOrb, a multi-tenant Docker control plane with Traefik routing and CI-to-registry pipelines. Looking to bring that backend depth to a team building high-scale, reliable systems.

WORK EXPERIENCE

PSQUARE COMPANY *🌐, Full Stack Developer* 07/2025 – Present

- Architected backend services for **Suryacon ERP**, a construction-ops platform spanning procurement, inventory, resource planning, and multi-level billing across **12** domain modules, handling deeply relational business logic at scale via ~330 APIs and 7-role RBAC.
- Implemented **offline-first** data resilience with a real-time sync layer (**Socket.IO + MongoDB change streams**), mirroring backend state to clients across ~ **50 collections** and reconciling incrementally via **PouchDB**, preserving data integrity and availability during connectivity gaps.
- Built **RabbitMQ**-backed async pipelines for notification delivery and hard-delete fanout, using durable queues with **DLQ/retry** to keep delivery reliable and decoupled from core request flow.
- Developed **data-intensive** purchasing and inventory modules, cart negotiation, PO lifecycle, QR dispatch/receive, site transfer, and stock ledger tracking.
- Designed cascading soft-delete and approval-gate logic across a 5-layer nested task hierarchy, with MD-level approval enforced at each layer.

Cloudberry Tech *🌐, Software Engineer* 12/2024 – 06/2025

- Engineered a real-time data pipeline for a **live copy trading platform** using multiplexed **SSE connections**, reducing server load by **30%** while maintaining low-latency trade updates across concurrent user sessions.
- Built a **drag-and-drop email editor** in **React** using **DnD Pangea**, handling complex nested component state and serialization logic for dynamic template rendering.
- Architected and shipped the company website with a performance-first approach, lazy loading, animation optimization via **Framer Motion**, achieving **45% faster** load times and **20% uplift** in engagement.

EDUCATION

BACHELOR OF ENGINEERING (COMPUTER SCIENCE), Chitkara University 2020 – 2024 | Patiala | PUNJAB
CGPA: 9.81

HIGHER SECONDARY (Non-Medical), MIA DAV PUBLIC SCHOOL 2020 | Mehtpur | Himachal Pradesh

SKILLS

BACKEND: Node.js, Express.js, NestJS, TypeScript, REST APIs, WebSockets, Socket.io, Server-Sent Events, RabbitMQ
DATABASE: MongoDB, Mongoose, Redis, PostgreSQL, TypeORM
INFRA: Docker, dockerode, Traefik, PM2, Nginx, Termius
FRONTEND: Next.js, React.js, JavaScript, Framer Motion, shadcn/ui, Tailwind CSS
AI / PRODUCTIVITY: 3Cs: Cursor, Claude, Copilot, Leonxlnx, Impeccable

PROJECTS

OrchOrb — Multi-Tenant Docker Control Plane | NestJS, React, Traefik, PostgreSQL, Redis, RabbitMQ

- Building a self-hosted control plane for Docker microservices, deploy from image or public Git, route and roll back live traffic per org, scale replicas, and stream logs/events, giving small teams deploy/ops UX without adopting Kubernetes
- Implementing **org-scoped multi-tenancy** with **Traefik-based dynamic routing**, version promote/rollback, and replica scaling
- Built deploy-from-image and deploy-from-Git pipelines, syncing live Docker runtime state with deployment metadata and activity events in **PostgreSQL**
- Architected the full stack end-to-end: **NestJS + dockerode** for container orchestration, React dashboard, **RabbitMQ** event pipeline, WebSocket log streaming, **CI to GHCR**
